

# Instructions

## IT'S LIKE MAGIC!

**A motif that is printed out large and simply colored in with colored pencils is turned into small, robust pendants or great jewelry in the oven that you can't buy like that.**

Our shrink film set contains a total of 10 A4 sheets (5 white and 5 transparent frosted sheets), which are suitable for printing with an inkjet printer and for painting. The bows are enough for a whole collection of different pieces of jewelry

## PRINTING

The shrink wrap has a rough side and a smooth side. Print the rough side of the film with your desired motifs using an inkjet printer.

Attention: Only use inkjet printers!

No laser printer, as it gets hot when printing and could melt the film. You can find suitable motifs at [www.bines-shop.com](http://www.bines-shop.com) (under "Shrink Wraps" you will find specially compiled coloring motifs that are ideally adapted to the format). Or paint and print your film in color or black and white with any other motif you like.

## COLORING

You will achieve ideal results if you color the motifs with colored pencils.

## CUT OUT

Cut out the motifs along the contour.

## PUNCHING

If you're making a pendant, don't forget to punch holes in the design before shrinking. Punch a sufficiently large hole with a hole punch or punch pliers, because the hole will also shrink!

Colored pencils are best suited for painting the foil.

*Magic*  
**SHRINK WRAP**

**Important:** Templates only  
Print on the film with an  
inkjet printer!

## SHRINKING

Children should definitely do the shrinking together with their parents. Preheat the oven (fan oven) to 170 degrees. Place the design on baking paper in the oven. You can watch the film shrink. Shrinking only takes 1 to 3 minutes. The design will bulge as it shrinks. Wait until the shrinking process is completely finished and the motif has shrunk to about a quarter of the size. The motif should now lie quite flat again and is still soft from the heat.

Using a cake peel (or similar), you can completely flatten the warm, soft motif on the baking tray before it cools down and hardens in the next few seconds.

## MAKE JEWELRY

Add a ribbon to the pendants or glue them to ring blanks or ear clips with jewelry glue.

 Deine Bine

Our shrink film set and much more are available directly from DESDA.

All other materials that I used can be found linked on my "Materialliste" on [www.bine-braendle.de](http://www.bine-braendle.de)

 **DESDA**  
www.desda.shop

The painted, shrunken motifs have a very beautiful, matt surface. If you want, you can still seal the shrunken motifs. For the elephants I used a special epoxy resin, especially for jewelry. This makes the surfaces look mirror-smooth and glazed.
